11. Statewide Initiatives and Partnerships

a. Direct Medical Care and Enabling Services

(max 2500 characters)

Smart Start/Home Visiting is enhanced home visiting program that offers services from registered nurses, social workers and nutritionists. Child Development Watch is a case management program for Children with Special Health Care Needs. Child Development Watch offers screening, diagnosis and referral services for children 0-3 years of age. Healthy Women, Healthy Babies is a preconception, interconception and prenatal care program for reproductive age women with one or more risk factors.

b. Population-Based Services

(max 2500 characters)

Newborn Metabolic Screening and Newborn Hearing Screening services are available for every infant born in Delaware. The Healthy Mothers and Infants Consortium's Public Awareness campaign provides messages to the general public about preconception health and its importance in achieving optimal birth outcomes. The Delaware Immunizations program provides immunizations to children and adults and the Family Planning program provides vaccine for the prevention of cervical cancer in women. The Division of Public Health also provides seasonal flu vaccinations as well a pandemic flu response. Other population-based services include lead prevention, assorted media campaigns, a healthy homes initiative, tobacco prevention and injury prevention.

c. Infrastructure Building Services

(max 2500 characters)

Delaware's MCH Program supports an assortment of infrastructure building services. The Early Childhood Comprehensive Services Initiative seeks to ensure that all children are ready for success in school. The State Systems Development Initiative supports program planning and development through the linkage of data sets for needs assessment, monitoring and evaluation purposes. Emergency Medical Services for Children seeks to ensure that pediatric issues are addressed in Delaware's EMS system and operates the Special Needs Alert Program for Children with Special Health Care Needs. Delaware's MCH programs also are active in supporting family organizations, particularly those dedicated to Children with Special Health Care Needs, in capacity building. The Delaware PRAMS survey is instrumental in identifying emerging risks for pregnant women. The MCH program also supports breastfeeding and child nutrition initiatives as part of its infrastructure building efforts.

For 2011-2014, indicator data come from the National Survey of Children with Special Health Care Needs (CSHCN), conducted by the U.S. Health Resources and Services Administration and the U.S. Centers for Disease Control and Prevention in 2009-2010. Compared to the 2001 CSHCN survey, there were revisions to the wording, order, and number of questions used to generate this indicator for the 2005-06 CSHCN survey. The questions were also revised extensively for the 2009-2010 CSHCN survey. Therefore, none of the three rounds of the surveys are comparable.

All estimates from the National Survey of CSHCN are subject to sampling variability, as well as survey design flaws, respondent classification and reporting errors, and data processing mistakes.

Method of Target Setting: 10% improvement over next 10 years

Compared to the 2001 CSHCN survey, there were wording changes, skip pattern revisions, and additions to the questions used to generate this indicator for the 2005-06 CSHCN survey. There were also issues around the reliability of the 2001 data because of the sample size. The data for the 2 surveys are not comparable for NPM 6, and findings from the 2005-06 survey may be considered baseline data. However, the same questions were used to generate the NPM 6 indicator for the 2009-2010 survey. Therefore, the 2005-2006 and 2009-2010 surveys can be compared.

All estimates from the National Survey of CSHCN are subject to sampling variability, as well as survey design flaws, respondent classification and reporting errors, and data processing mistakes.

The indicators for the index measure are derived from the National Survey of Children's Health. Baseline data was established from the 2007 NSCH Survey (NSCH Health Disparities Snapshot). For the indicators selected at baseline, CSHCN and their families were significantly different than children and their families without special health care needs. Since this is a measure based on improvement - reducing the disparities between CSHCN and those without special health care needs, the baseline indicator for 2011 is set at zero (0).

See Form 16, SPM 10 "Detail Sheet" for how this measure will be determined.

LIST OF MCH PRIORITY NEEDS

[Sec. 505(a)(5)]

STATE DE FY: 2013

Your State's 5-year Needs Assessment should identify the need for preventive and primary care services for pregnant women, mothers, and infants; preventive and primary care services for children and services for Children with Special Health Care Needs. With each year's Block Grant application, provide a list (whether or not the priority needs change) of the top maternal and child health needs in your state. Using simple sentence or phrase, list below your State's needs. Examples of such statements are: "To reduce the barriers to the delivery of care for pregnant women, " and "The infant mortality rate for minorities should be reduced."

MCHB will capture annually every State's top 7 to 10 priority needs in an information system for comparison, tracking, and reporting purposes; you must list at least 7 and no more than 10. Note that the numbers listed below are for computer tracking only and are not meant to indicate priority order. If your State wishes to report more than 10 priority needs, list additional priority needs in a note at the form level.

1. The infant mortality rate in Delaware should be reduced.
2. The incidence of low birth weight and preterm births should be reduced.
3. The prevalence of obesity among children and teens should be reduced.
4. The prevalence of obesity among women of childbearing age should be reduced.
5. The incidence of unintentional injury and the mortality rate among children and youth should be reduced.
6. The prevalence of smoking among teens should be reduced.
7. A multi-faceted approach to providing support to organizations serving families with children with special health care needs should be implemented statewide.
8. Developmental delay in early childhood should be identified early and appropriate intervention services should be provided to children at risk of developmental delay.
9. Health disparities among Families with Children with Special Health Care Needs should be reduced.
10. Oral health preventive and treatment services should be made available to children, including children with special health care needs.

STATE PERFORMANCE AND OUTCOME MEASURE DETAIL SHEET
STATE: DE

SP() # 1

PERFORMANCE MEASURE:

The rate of infant deaths between birth and 1 year of life.

STATUS:

Active

GOAL:

Reduce the Statewide infant mortality rate to 4.5 per 1,000 live births.

DEFINITION:

The number of deaths of infants (one year of age or younger) per 1000 live births

Numerator:

The number of deaths to live born infants aged 0-364 days during the year.

Denominator:

Number of live births during the year.

Units: 1000 **Text:** Rate

HEALTHY PEOPLE 2020 OBJECTIVE:

16-1c. Reduce fetal and infant deaths.

Infant death is a critical indicator of the health of a population. It reflects the overall state of maternal health as well as the quality and accessibility of primary health care available to pregnant women and infants (Healthy People 2010).

DATA SOURCES AND DATA ISSUES:

Delaware Vital Statistics

SIGNIFICANCE:

Infant Mortality is an important measure of a nation's health and a worldwide indicator of health status and social well-being. Delaware is ranked 5th highest in infant mortality nationwide.

SP() # 2

PERFORMANCE MEASURE:

The rate of live births at 32 to 36 weeks of gestation(preterm birth).

STATUS:

Active

GOAL

Reduce the rate of live births at 32 to 26 weeks of gestation to 96 per 1,000.

DEFINITION

The rate of live births at gestational ages of 32 to 36 weeks during the year per 1,000 live births.

Numerator:

The number of live births at gestational ages of 32 to 36 weeks during the year.

Denominator:

The number of live births during the year.

Units: 1000 **Text:** Rate

HEALTHY PEOPLE 2020 OBJECTIVE

16-11b. Reduce preterm births.

Approximately two-thirds of LBW infants and 98 percent of VLBW infants are born preterm. In addition, preterm birth is the leading cause of those neonatal deaths not associated with birth defects (Healthy People 2010).

DATA SOURCES AND DATA ISSUES

Delaware Vital Statistics Birth Records.

SIGNIFICANCE

Short gestation is one of the primary causes of infant mortality. Four conditions (birth defects, conditions related to short gestation/low birth weight, SIDS and respiratory distress syndrome) account for more than half of all infant deaths nationwide.

SP() # _____ 3

PERFORMANCE MEASURE:

The rate of low birth weight and very low birth weight deliveries

STATUS:

Active

GOAL

Reduce the rate of infants born at less than 2,500 grams to 5.9 per 1,000 live births

DEFINITION

The rate of live births with a birth weight of less than 2,500 grams per 1,000 live births

Numerator:

The number of live births with a birth weight of less than 2,500 grams

Denominator:

The number of live births

Units: 1000 **Text:** Rate

HEALTHY PEOPLE 2020 OBJECTIVE

16-10. Reduce low birth weight (LBW) and very low birth weight (VLBW).

LBW is the risk factor most closely associated with neonatal death; thus, improvements in infant birth weight can contribute substantially to reductions in the infant mortality rate (Healthy People 2010).

DATA SOURCES AND DATA ISSUES

Delaware Vital Statistics Birth Records

SIGNIFICANCE

LBW/VLBW is the risk factor most closely associated with neonatal death; thus, improvements in infant birth weight can contribute substantially to reductions in the infant mortality rate.

SP() # _____ 4

PERFORMANCE MEASURE:

The percent of children and adolescents who are overweight or obese.

STATUS:

Active

GOAL

Reduce the number of children that are overweight or obese to 5 percent.

DEFINITION

The percent of children aged 6 to 19 years that are overweight or obese.

Numerator:

The number of children aged 6 to 19 years that are overweight or obese.

Denominator:

The number of children aged 6 to 19 years.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2020 OBJECTIVE

19-3. Reduce the proportion of children and adolescents who are obese or overweight.

Maintenance of a healthy weight is a major goal in the effort to reduce the burden of illness and its consequent reduction in quality of life and life expectancy (Healthy People 2010).

DATA SOURCES AND DATA ISSUES

Delaware Youth Risk Behavior Survey.

SIGNIFICANCE

Obesity and overweight are at epidemic proportions nationwide. In Delaware, over a third of children are overweight. This increases health risks, including risk for chronic health conditions.

SP() # 5

PERFORMANCE MEASURE:

The percent of women of childbearing age (15-44) who are obese (BMI 30 or higher).

STATUS:

Active

GOAL

Reduce the percent of women aged 15 to 44 years that are obese to 15%.

DEFINITION

The percent of women aged 15 to 44 that have a Body Mass Index of 30 or higher.

Numerator:

The number of women aged 15 to 44 years with a BMI equal to or greater than 30.

Denominator:

The number of women aged 15 to 44 years.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2020 OBJECTIVE

19-2. Reduce the proportion of adults who are obese.

Maintenance of a healthy weight is a major goal in the effort to reduce the burden of illness and its consequent reduction in quality of life and life expectancy.

DATA SOURCES AND DATA ISSUES

Delaware Behavioral Risk Factor Surveillance.

SIGNIFICANCE

Obesity among women of childbearing age increases the overall risk of mortality for women and increases the risk for complications of pregnancy including hypertension and gestational diabetes.

SP() # _____ 6

PERFORMANCE MEASURE:

The mortality rate among children and youth (0-21 years) due to unintentional injuries.

STATUS:

Active

GOAL

Reduce the mortality rate due to unintentional injuries among children and youth age 0-21 years to 17.5 per 100,000.

DEFINITION

The rate of deaths to children aged 0-21 due to unintentional injuries per 100,000 children aged 0-21 years.

Numerator:

The number of deaths to children aged 0-21 years due to unintentional injuries.

Denominator:

The number of children age 0-21 years.

Units: 100000 **Text:** Rate

HEALTHY PEOPLE 2020 OBJECTIVE

15-13. Reduce deaths caused by unintentional injury.

Injuries are a leading cause of death among children and youth nationwide and in Delaware.

DATA SOURCES AND DATA ISSUES

Delaware Vital Statistics data.

SIGNIFICANCE

Injuries are a leading cause of death among children and youth nationwide and in Delaware.

SP() # _____ 7

PERFORMANCE MEASURE:

The percent of Delaware public high school students who currently smoke.

STATUS:

Active

GOAL

Reduce the percent of high school student who currently smoke to 10%.

DEFINITION

The percent of high school students (grades 9-12) that report smoking tobacco in the past 30 days.

Numerator:

The number of students in grades 9-12 that report smoking in the past 30 days.

Denominator:

The number of students in grades 9-12.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2020 OBJECTIVE

27-2. Reduce tobacco use among adolescents.

Because tobacco use is linked with numerous adverse health outcomes, reducing tobacco use will reduce illness, disability, and death across a spectrum of conditions, including heart disease, cancer, and chronic lung disease (Healthy People 2010).

DATA SOURCES AND DATA ISSUES

Delaware Youth Risk Behavior Survey.

SIGNIFICANCE

There are approximately 430,000 tobacco related deaths each year nationwide. Since tobacco addiction usually begins in adolescence, the best way to reduce tobacco use is to prevent youth initiation of tobacco use.

SP() # _____ 8

PERFORMANCE MEASURE:

The percent of benchmark measures completed for implementation of a formal umbrella structure for organizations serving families with children with special health care needs in Delaware.

STATUS:

Active

GOAL

To increase the effectiveness and efficiency of organizations that serve families of children with special health care needs throughout Delaware.

DEFINITION

The percentage of performance benchmarks the Title V/CSHCN program has reached toward implementation of an overarching structure that supports organizations that serve families with CSHCN. Benchmarks: 1) complete key informant interviews and needs assessment of CSHCN organizations; 2) develop and issue a Request for Proposals for an "umbrella" organization in Delaware; 3) implement a contract with successful bidder; 4) formalize the structure and governance of the "umbrella" organization (executive board, advisory board, strategic plan, policies/procedures, etc.); 5) complete an implementation evaluation and long term business plan, including identification of funding streams.

Numerator:

Number of benchmarks Delaware has completed in implementing the CSHCN "umbrella" organization.

Denominator:

Total number of benchmarks (5)

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2020 OBJECTIVE

None.

This performance measure is not directly related to a Healthy People 2010 Objective.

DATA SOURCES AND DATA ISSUES

Title V/CSHCN program data.

SIGNIFICANCE

Fragmentation of efforts with regard to services for families with children with special health care needs results in inefficient and less than optimal use of available resources. Under a shared structure, organizations that serve families of CSHCN will be able to collaborate and access resources for 1) information and referral; 2) development of organizational capacity; 3) training of parents and professionals; 4) funding; and 5) advocacy.

SP() # _____ 9

PERFORMANCE MEASURE:

The percentage of children aged 4 months to 5 years with no or low risk for developmental, behavioral or social delays.

STATUS:

Active

GOAL

Increase the percentage of children with low/no risk of developmental, behavioral or social delays.

DEFINITION

The basic logic for scoring the PEDS[®] is that for specific ages there are age-specific parental concerns that are "predictive" of a child's risk for delays. The more concerns a parent has to items that are "predictive" of a child's risk, the more at risk the child is for delays. - Children whose parents report concerns to 2 or more items predictive of delays, are identified as at "high risk". - Children whose parents have concerns to one item that is predictive of a delay are identified as at "moderate risk". - Children whose parents have concerns, but those concerns are not predictive of delays are identified at "low risk". - Lastly, children whose parents have no concerns to any of the eight items asked, are identified as "no risk". (NSCH, 2007).

Numerator:

Number of Children with no or low-risk for developmental, behavioral or social delay.

Denominator:

Number of Children aged 4 months through 5 years.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2020 OBJECTIVE

None.

This objective is not directly related to a Healthy People 2010 Objective.

DATA SOURCES AND DATA ISSUES

NSCH, PEDS results, State Surveys.

SIGNIFICANCE

Developmental, behavioral and social delays adversely affect an optimal health trajectory for children throughout their life.

SP() # 10

PERFORMANCE MEASURE:

The percent of health indicators that improve across four domains (child health, mental health, health care access and quality, and family health) for children with special health care needs.

STATUS:

Active

GOAL

To eliminate health disparities for families of children with special health care needs throughout Delaware, we must ensure access to the services, information and support they need to improve health. This measure seeks to eliminate health disparities between children with special needs and those children without special needs.

DEFINITION

This is an index measure based on the following indicators measured for CSHCN and children without special health care needs: 1) Percentage of children ages 0-17 whose overall health is excellent or very good; 2) Percentage of children ages 1-17 whose teeth are in excellent or very good condition; 3) Percentage of parents who report having a medical home; 4) Percentage of children ages 0-17 needing care coordination in the past year that received effective care coordination; 5) Percentage of children ages 0-17 who needed and had problems getting specialist care in the past year; 6) Percentage of mothers whose children ages 0-17 are currently reported in excellent or very good general health; 7) Percentage of mothers whose children are currently living in the same household living reported in excellent or very good mental health; 8) Percentage of fathers whose children are currently living in the same household reported to be in excellent or very good mental health.

Numerator:

The number of indicators which have improved for CSHCN (relative to children without special health care needs) since the previous National Survey of Children's Health.

Denominator:

The denominator is the number of total indicators in the index (8).

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2020 OBJECTIVE

Multiple Objectives

This state performance measure is related to multiple health objectives from Healthy People 2010. The SPM is also related to the overarching goal of HP 2010 to reduce health disparities.

DATA SOURCES AND DATA ISSUES

The indicators for the index measure are derived from the National Survey of Children's Health. Baseline data was established from the 2007 NSCH Survey (NSCH Health Disparities Snapshot). For the indicators selected at baseline, CSHCN and their families were significantly different than children and their families without special health care needs. Since this is a measure based on improvement - reducing the disparities between CSHCN and those without special health care needs, the baseline indicator for 2011 is set at zero (0).

SIGNIFICANCE

The reduction and elimination of health disparities among children with special health care needs and their families is an important priority of the Delaware CSHCN Program. This measure is an attempt to capture the effects of the implementation of a "Family Support Network" across a number of domains related to health among this population.

HEALTH STATUS INDICATOR #04C

The rate per 100,000 of nonfatal injuries due to motor vehicle crashes among youth aged 15 through 24 years

Annual Indicator Data

	2007	2008	2009	2010	2011
Annual Indicator	176.0	159.5	133.8	133.8	133.8

Denominator	116,509	116,614	118,117	118,117	118,117

Check this box if you cannot report the numerator because

1. There are fewer than 5 events over the last year, and
2. The average number of events over the last 3 years is fewer than 5 and therefore a 3-year moving average cannot be applied.
