The system of care is a statewide integrated network of providers that includes local, regional and tertiary care facilities. Providers and families are supported through a case management system that includes nurse case managers, social workers and health care professionals. The service continuum includes prevention, early intervention, primary care and medical and therapeutic care. Child Health Services for Children under 1 - Child Health Services are provided mainly by the County Health Departments and include immunizations, periodic health history and physical examinations, laboratory screening tests for health indicators such as lead and anemia, developmental screening, risk assessment, parent education, accident prevention and substance abuse prevention education.

b. Population-Based Services:  
 (max 2500 characters)

Pregnancy Associated Mortality Review (PAMR) project - a population-based surveillance and selective case review process that monitors trends in pregnancy associated deaths, and identifies gaps in care and systematic service delivery problems. Fetal and Infant Mortality Review (FIMR) Project - a community-based effort to provide quality improvement mechanisms that identify medical, psychosocial, environmental and structural factors that may contribute to fetal and infant deaths. Healthy Start Prenatal Screening - used to identify pregnant women who have an increased risk of pregnancy complications or poor birth outcomes due to environmental, medical, nutritional, or behavioral risk factors. Every pregnant woman is eligible for the screening process. Women at-risk may be eligible for care coordination and other services, based on need and local resources. Healthy Start Infant Screening - used to identify infants who are at increased risk of poor health or adverse development due to environmental, medical, nutritional, or behavioral risk factors. Healthy Start Evaluation - The Healthy Start program includes an evaluation component of all Healthy Start services. This includes tracking the number of participants who receive Healthy Start services and comparing these numbers to indicators of improved pregnancy outcomes or infant developmental outcomes such as infant mortality, entry into prenatal care, and the number of sudden infant deaths.

Compared to the 2001 CSHCN survey, there were wording changes, skip pattern revisions, and additions to the questions used to generate this indicator for the 2005-06 CSHCN survey. There were also issues around the reliability of the 2001 data because of the sample size. The data for the 2 surveys are not comparable for NPM 6, and findings from the 2005-06 survey may be considered baseline data. However, the same questions were used to generate the NPM 6 indicator for the 2009-2010 survey. Therefore, the 2005-2006 and 2009-2010 surveys can be compared.

All estimates from the National Survey of CSHCN are subject to sampling variability, as well as survey design flaws, respondent classification and reporting errors, and data processing mistakes.

**STATE FL FY: 2013**

Your State's 5-year Needs Assessment should identify the need for preventive and primary care services for pregnant women, mothers, and infants; preventive and primary care services for children and services for Children with Special Health Care Needs. With each year's Block Grant application, provide a list (whether or not the priority needs change) of the top maternal and child health needs in your state. Using simple sentence or phrase, list below your State's needs. Examples of such statements are: "To reduce the barriers to the delivery of care for pregnant women, " and "The infant mortality rate for minorities should be reduced."

MCHB will capture annually every State's top 7 to 10 priority needs in an information system for comparison, tracking, and reporting purposes; you must list at least 7 and no more than 10. Note that the numbers listed below are for computer tracking only and are not meant to indicate priority order. If your State wishes to report more than 10 priority needs, list additional priority needs in a note at the form level.

1. Prevent unintended and unwanted pregnancies.
2. Promote preconception health screening and education.
3. Promote safe and healthy infant sleep behaviors and environments.
4. Prevent teen pregnancy.
5. Improve dental care access, both preventative and treatment, for children.
6. Increase access to medical homes and primary care for all children, including children with special health care needs.
7. Improve health care transition for adolescents and young adults with special health care needs to all aspects of adult life.

SP() # <u>2</u>	
<b>PERFORMANCE MEASURE:</b>	The percentage of births with inter pregnancy interval less than 18 months.
<b>STATUS:</b>	Active
<b>GOAL</b>	To increase time intervals between pregnancies.
<b>DEFINITION</b>	The percentage of births with inter pregnancy interval less than 18 months. <b>Numerator:</b> Number of women who have a subsequent birth within 18 months of a previous delivery. <b>Denominator:</b> Number of live births in the calendar year. <b>Units:</b> 100 <b>Text:</b> Percent
<b>HEALTHY PEOPLE 2020 OBJECTIVE</b>	FP-5 Reduce the proportion of pregnancies conceived within 18 months of a previous birth. Baseline: 35.3 percent Target: 31.7 percent
<b>DATA SOURCES AND DATA ISSUES</b>	The data source is the Florida Department of Health, Vital Statistics Office. The data is taken directly from the Certificate of Live Birth data.
<b>SIGNIFICANCE</b>	Increasing the time interval between pregnancies lowers the risk of adverse perinatal outcomes, including low birth weight, preterm birth, and small-for-size gestational age.

SP() # \_\_\_\_\_ 3

**PERFORMANCE MEASURE:**

The percentage of women having a live birth who received preconception counseling about healthy lifestyle behaviors and prevention strategies from a health care provider prior to pregnancy.

**STATUS:**

Active

**GOAL**

To increase the number of women who received preconception screening and counseling prior to pregnancy.

**DEFINITION**

Of those women who gave birth in the calendar year reported, the percentage of women who received preconception counseling

**Numerator:**

Women having a live birth who received preconception counseling on 11 topics prior to pregnancy.

**Denominator:**

Number of live births in the calendar year.

**Units:** 100 **Text:** Percent

**HEALTHY PEOPLE 2020 OBJECTIVE**

MICH-16

Increase the proportion of women delivering a live birth who received preconception care services and practiced key recommended preconception health behaviors.

MICH-16.1

Discussed preconception health with a health care worker prior to pregnancy.

**DATA SOURCES AND DATA ISSUES**

An optional question on preconception health counseling with a listing of 11 preconception health topics on Phase 6 PRAMS Survey in Florida starting in 2009.

**SIGNIFICANCE**

Improving the preconception health of women prior to pregnancy is believed to be the best new strategy to improve perinatal and child health. This includes promoting family planning and birth spacing, ceasing substance abuse, managing chronic conditions, and improving health behaviors.

SP() # \_\_\_\_\_ 4

**PERFORMANCE MEASURE:**

The percentage of infants not bed sharing.

**STATUS:**

Active

**GOAL**

To increase the number of infants who do not often share a common bed surface with others when sleeping.

**DEFINITION**

Measure of the percentage of infants who do not share a common bed with others.

**Numerator:**

Statistically weighted number of live births to PRAMS respondents who are most often do not sleep in the same bed as others.

**Denominator:**

Statistically weighted number of live births to PRAMS respondents in the calendar year.

**Units:** 100 **Text:** Percent

**HEALTHY PEOPLE 2020 OBJECTIVE**

MCH-1.9

Infant deaths from sudden unexpected infant deaths (includes SIDS, Unknown Cause, Accidental Suffocation, and Strangulation in Bed) Target: 0.84 infant deaths per 1,000 live births.

**DATA SOURCES AND DATA ISSUES**

Phase 5 and 6 PRAMS Survey in Florida starting in 2004.

**SIGNIFICANCE**

Infants who share a common bed surface with others are at risk for suffocation, positional asphyxia, and strangulation. In addition, they are also at increased risk of SIDS.

SP() # 5

**PERFORMANCE MEASURE:**

The percentage of infants back sleeping.

**STATUS:**

Active

**GOAL**

To increase the number of infants who are placed most often on their backs to sleep.

**DEFINITION**

The percentage of infants back sleeping.

**Numerator:**

Statistically weighted number of live births to PRAMS respondents who are most often place infants on their back to sleep.

**Denominator:**

Statistically weighted number of live births to PRAMS respondents in the calendar year.

**Units:** 100 **Text:** Percent

**HEALTHY PEOPLE 2020 OBJECTIVE**

MICH-20

Increase the proportion of infants who are put to sleep on their backs. Target: 75.9 percent Baseline: 69.0 percent in 2007

**DATA SOURCES AND DATA ISSUES**

Phase 6 PRAMS Survey in Florida starting in 2009.

**SIGNIFICANCE**

Placing an infant on their back to sleep greatly reduces the risk of SIDS in both healthy full-term and preterm infants.

SP() # \_\_\_\_\_ 6

**PERFORMANCE MEASURE:**

The percentage of teen births, ages 15-17, that are subsequent (repeat) births.

**STATUS:**

Active

**GOAL**

To lower the percentage of subsequent births to teens age 15 to 17.

**DEFINITION**

Measures the percentage of teen births, ages 15-17, that are subsequent (repeat) births.

**Numerator:**

Number of females age 15-17 under with a second or higher order birth. For multiple births only the first of the multiple births are used in this measure.

**Denominator:**

Number of live births to females ages 15-17 in the calendar year.

**Units:** 100 **Text:** Percent

**HEALTHY PEOPLE 2020 OBJECTIVE**

Related to FP-8

FP-8.1 Reduce the pregnancy rate among adolescent females aged 15 to 17 years. Target: 36.2 pregnancies per 1,000.

Related to FP-11

FP-11.1 Increase the proportion of sexually active females aged 15 to 19 years who use a condom and hormonal or intrauterine contraception at first intercourse. Target: 14.8 percent.

**DATA SOURCES AND DATA ISSUES**

Birth certificates are the source of data on mother's age, births, and teen with a second or higher order birth.

**SIGNIFICANCE**

A second teen birth is associated with the lack of high school completion, inability to work, solidifying the cycle of poverty for young mothers, creating welfare dependency, and increased risk of infant mortality.

SP() # \_\_\_\_\_ 7

**PERFORMANCE MEASURE:**

The percentage of low-income children who access dental care

**STATUS:**

Active

**GOAL**

To increase access to dental services for low-income children in order to provide clinical preventive and treatment services needed to improve and maintain oral health.

**DEFINITION**

The percentage of low-income children who access dental care.

**Numerator:**

Number of children who receive services through Medicaid providers, county health departments and community health centers.

**Denominator:**

The number of low-income children below 200% of the federal poverty level.

**Units:** 100 **Text:** Percent

**HEALTHY PEOPLE 2020 OBJECTIVE**

OH-8

Increase the proportion of low-income children and adolescents who received any preventive dental service during the past year.

Baseline: 26.7 percent of children and adolescents aged 2 to 18 years at or below 200 percent of the Federal poverty level received a preventive dental service during the past year in 2007. Target: 29.4 percent.

**DATA SOURCES AND DATA ISSUES**

Data are compiled from annual ad hoc reports provided by the Medicaid program, from county health department data maintained by the Public Health Dental Program, and community health center data extracted from the annual Uniform Data System report.

**SIGNIFICANCE**

Low-income children are at high risk for dental disease because of the lack of access to professional care. Dental caries is the most common chronic disease of children, but amenable to early intervention. Early dental disease can be reversed and more advanced disease can be treated before it progresses to pain, infection and the need for more expensive intervention.
